

Application: Speleoklub Týčany karst Czech Republic

The company ELIS PLZEN a. s. supplied with sponsoring support to "Speleoklub" at Týčany a **FLONET FN2014.1 DN80 induction flow meter** in a compact version provided with soft-rubber lining. Speleoklub Týčany does exploration and researches of the Týčanský karst district where they remove cave silt using the local river water to gain access to new caves and elucidate their origin and formation. The exploration team use FLONET flow meter to measure the volume of the displaced water containing silt, small stones and deposited minerals. In three days of this hydro-mining activity, the volume of the solid substances of mainly limestone nature is up to eight cubic meters.

Induction flow meter FLONET FN2014.1 DN 80/PN16
